CATALOGUE AND PRICE LIST

OF THE

MALLINCKRODT NURSERY,

C. T. Mallinckrodt & Son, Props.,

ST. CHARLES, MO.

For Fall 1893 and Spring 1894.

THIS LIST ANNULS ALL FORMER PRICE LISTS.

Descriptive Catalogue Free on Application.

N. B. If you have no use for this catalogue, please hand it to some one interested and your kindness will be highly appreciated.

Yours Respectfully,

C. T. MALLINCKRODT & SON.
THE KRULL.

A winter Pear of our introduction which promises to become one of the leading varieties. Its favorable points are: 1st—Hardiness and productiveness of tree. 2nd—Its finely colored fruit and thin tough skin makes it a valuable marketer. 3d—Its late keeping qualities combined with fine flavor will make it second to none for profitable planting. See enclosed circular for what others say about it as also its origin.
To Our Patrons:

In presenting this, our annual catalogue and price-list, we are pleased to announce that our stock of trees and plants is of unusually fine quality and more extensive in quantity than ever before, which will enable us to fill orders entrusted to us promptly and satisfactory.

Purchasers will know the advantage of dealing direct with an old and reliable firm, who have done a legitimate business for fifty years, and thoroughly testing all fruits and know what they offer their customers.

We employ local agents, of course, but they are men who are well acquainted in their respective territories and moreover we personally superintend the filling of every order, hence our customers may rely on being faithfully and honestly dealt with while placing their orders with such agents.
Terms and Conditions.

TERMS: Net Cash Except by Special Agreement.

Small parcels sent by mail, at rates in this list, with postage added to bill.

Packages will be delivered to the Express, Railroad, or on board of Missouri River Packets at St. Charles, Mo., free of cartage. When proper receipts for delivery at any of these places are procured, the goods are entirely at buyer's risk, and if lost or injured, recourse must be had on the carriers.

Errors by us will be cheerfully corrected, but should be reported at once after receipt of goods. Money may be sent by Express, Draft on St. Charles, St. Louis or New York City banks, or through Postal Order, or Registered Letter. If by private check, except on St. Louis or St. Charles, add 25 cents for collection. Parties unknown to us must accompany their orders with the cash, or give satisfactory references as to their responsibility.

All articles will be distinctly and carefully labeled before packing. Give your full Name, Postoffice, County and State, with your orders; also state by what conveyance the goods are to be sent. If the latter is omitted we will use our best judgment, and forward accordingly; but in no case will we be responsible for losses or delays occurring through such shipments.

NOTE.

These quotations are for the quantities specified, except 5 at 10, 50 at 100 and 500 at 1000 rates. On orders amounting to $50.00, or more, we will give special rates. All contemplating to plant largely will please send us their list of wants and we will quote lowest figures.

TIME OF TAKING UP.

Stock will be in condition to dig in Fall, after October 15th, until hard freezing. In Spring as soon as frost is out of the ground, usually about March 1st.

Order Early and Secure Full Stock to Select from.
"First Come, First Served."

THE "KRULL"

Combines among its claims for a place along-side other sorts, long keeping, good shipping, attractive appearance, fine size, pleasant flavor, vigor, health and productiveness of tree. All these are qualities which will render it most desirable to the commercial fruitgrower as well as to the amatuer.

While the introduction of this new Pear affords me great satisfaction, I feel confident that it will also, to a great extent, satisfy the desire for a really good Winter Pear, suited to the "South West".

DESCRIPTION.

The cut on front page fairly represents size and shape. The color is lemon yellow, covered with a delicate bloom, giving a rich and attractive appearance. Skin thick and strong; flesh white, firm until fully ripe, when it becomes juicy and melting; flavor, sweet, rich and pleasant.

The tree is vigorous and robust of somewhat irregular habit, very productive; the original tree from which I propagate having born fair annual crops since of bearing age, while in 1888 it produced 17 and '89, 19 bushels of hand-picked fruit. The crop of '90 was destroyed by frost following a contracted very mild spell of weather during January which had started the buds almost to breaking open. This season the crop is again moderate, caused by severe clipping of the tree for wood to propagate.

HISTORY.

Upon thorough inquiry I learn that my first information, pointing to a remote pioneer origin, was erroneous. The following is well authenticated: About 1835 a Mr. "Hoester" immigrated from Germany, bringing with him a number of small pear trees, among them the now "Krull", which, he planted on his farm in Greens Bottom, St. Charles County, Mo., where it grew and produced fruit. A Mr. Krull saw the fruit and grafted from the tree, and this was the origin of the tree from which I have my stock.

The original "Hoester" tree has perrished and Mr. Hoester has long since departed this life, but his memory will remain and be perpetuated through this pear, which we may enjoy and utilize.

Under the above circumstances the name should have been "Hoester", but the fruit having become somewhat known as "Krull" and furthermore, whereas a man of that name has perpetuated it, I deem it best to leave the name as it is.

PRICE LIST 1891-2.

2 year tree, 4-6 feet, $1.50 each.
1 year tree, 2-3 feet, $1.00 "
1 year tree, (dwarf) 2-3 feet $1.00 each.
One year trees will be sent by mail at above price if money is sent with order.

TERMS.

Orders from unknown parties must be accompanied by the money to secure attention.—Orders will be filled in rotation as received.

C. T. MALLINCKRODT.

N. B.—No buds or scions for sale.
TESTIMONIALS.

The following testimonials were received in reply to specimens sent before entering into the propagation of the "Krull" largely, not wishing to rely on my single judgment as to its merits &c. I think they fully establish all I claim.

From SAMUEL MILLER,
Buffalo, Mo., January 14, 1890.
This morning I ate one of the Krull pears you sent me while at your place October last. I find it so good that it will be a real pleasure to me to recommend it, if considered the best pear that I have met with so late in the winter in Missouri. It will keep until April easily.
(Note.—These were specimens which had been exhibited at fairs during first half of September, 1889, and were not fully grown or matured and consequently no fair sample.)

Upon sending Mr. Miller more and fairer specimens he wrote, January 30, 1890:
Thanks for basket of Krull Pears and Scions—I will waver there is not another pear as good, as handsome and in as good keeping as this one in this latitude. If managed right it will bring you fame and fortune.

On April 26, 1890, Mr. Miller again writes:
There are still two so tempting pears of the Krull you sent in January in my cellar.

From A. A. BLOOMER,
Fredericksburg, Mo., January 11, 1890.
C. T. Mallinckrodt, Esq., St. Charles, Mo.—Dear Sir—Your favor dated the 7th inst., is before me. I also received the little basket containing 8 pears I ate one, gave one to my grand daughter and one to Mr. Lawyer, who is an amateur horticulturist. He ate it at once and pronounced it delicious.
My opinion is, that, although not so fine as Bartlett, Seckel and Beurre D'Anjou at present, it is a valuable acquisition on account of its productiveness not only, but especially for its keeping qualities.
Although of medium size, its fine uniform appearance and nice color, make it attractive, and its leathery skin permits its safe shipping to any part of the world.

I keep the five specimens remaining in the little basket, in paper and bran, as you have suggested, and have on the east part of my house, in order to test how long they keep to attain perfect ripeness, when they will have a still better flavor than at present.—I then propose to send one to the "Burn World," wherein I shall try to describe it.

I mean to use two scions in grafting on a standard LeConte and the other on Quince.
I thank you heartily for the favor, and should I at any time be able to serve you in any thing, it would afford me the greatest pleasure, to testify to you my greatfulness. Please to let me know when you'll have some for sale.

From P. M. KIELY & CO., Commission Merchants, No. 64 North Third street, St. Louis, Mo.,
January 30th, 1890.
C. T. Mallinckrodt, —Dear Sir.—Sample of pears duly received. I was very much surprised to find such an attractive and highly colored pear at this time of the year, and much especially from this State. I ate one of them, and while the texture or quality is not equal to the Winter Nelis, I certainly regard it as a valuable acquisition to the market of pears. Its brilliant color for a late variety, gives it an especial commercial value, as it would sell much more readily than a less attractive sort, even if the quality was not as good.

From E. T. HOLLISTER & Co., Commission merchants, 811 North Third street, St. Louis, Mo.,
March 1st, 1890.
C. T. Mallinckrodt, Esq.—Dear Sir,—Your sample of Krull Winter Pear came duly to hand, and we kept one of the specimens 'til to-day.
While the quality is not equal to some of the half varieties, we regard it as a valuable acquisition on account of its keeping quality.

From T. V. MUNSON, Esq.,
Denison, Texas, February 3d, 1890.
The two specimens of "Krull" Pear and letter were received.
The specimens were somewhat shriveled yet still juicy, agreeably sweet with a good flavor, reminding of the Bartlett. Had they been kept in a little more moist condition, I think they would have been plump and more tender.

Altogether it is a good pear and has remarkable keeping qualities.
I thank you for the specimens which allowed me to see and test this remarkable pear. I know of no other such keeper among pears.

Alton, Ill., January 1st, 1890.
Mr. C. T. MALLINCKRODT,—Dear Sir.—When at the meeting of the Missouri Horticultural Society in December last, I saw your new pear and was pleased with what I saw and heard about it. I had some sent to Hamilton to our meeting, one of these I brought home and ate it to-day and found it good. It was sound and would probably have kept sound for some time longer. I would like to know how it is for productiveness, and how long it takes to come into bearing. Also whether any scions can be had for testing, if so, I would like to get some. An early reply will greatly oblige. Respectfully,

E. A. RIEHL,
Rochester, N. Y., Feb. 12th, 1890.

Mr. C. T. MALLINCKRODT,—Dear Sir.—Your favor of 30th ult., came duly to hand. A few pears are on order. I have kept it in a warm room since it was received, but the heat seems to have no effect. It will be a good baking or stewing pear and for those purposes valuable, as it keeps so well. If a good grower and bearer it will be worth propagating.

Owing to the unusually wet and warm autumn and winter, our fruits have all kept badly. We have placed at Josephine de Maine and Winter Nelis a day or two ago.
Respectfully yours,

P. BARRY,
Lincoln, Mo., February 3, 1890.

Mr. C. T. MALLINCKRODT, St. Charles, Mo.—Dear Sir.—The pears you mailed for me came in good condition. They are beatifully scinned. I sampled one of them. I find it to be extra fine grained and from the solidity of the flesh and smooth, tough skin, it is evidently a long keeper and a very good pear. I think it will pay to propagate and place in the front with our best pears.

Respectfully,

C. H. FINK.
Marengo, Ill., Feb. 1, 1890.
From C. W. Prescott.—Sample of "Krull" received; all kept except two of the pears and the others I will keep. Quality and appearance good; for market I should say it would be No. 1, the skin is strong enough to hold it and it will certainly carry well.
U. S. Department of Agriculture, Washington, C. C., Feb. 6, 1890.

Mr. MALINCKRODT, St. Louis, Mo. — Dear Sir: Having recently received two pears from you, I desire to say that they arrived in quite good condition. In quality the fruit is excellent and in size and keeping quality. If the tree bears well and produces specimens of about the size which I received, I do not see why it may not prove a valuable addition to the list of winter pears. I am looking forward to hear from you further on the subject, and have a complete knowledge of the history of the variety, I am very respectfully,

H. E. VAN DEMAN, Pomologist.

On February 6, 1890, Mr. VanDeman writes: I am anxious to know everything about the "Krull." There is scarcely any doubt in my mind about its being a valuable acquisition to the list of winter pears, in which category its size, keeping quality, and flavor are excellent. The flesh of your pear is very firm and the flavor is good. The name "Krull's Winter" is rather too long, and I would suggest, that it be abbreviated to "Krull" unless you desire to have some other name given it. The rules adopted by the American Pomological Society and some other societies of like character do not favor double names, and in many of the long sounding titles and other objectionable features, hence I suggest the single name.

Very respectfully,

H. E. VAN DEMAN, Pomologist.

Washington, D. C., January 15, 1891.

Mr. C. MALINCKRODT.—Dear Sir: In the course of the work of this division, a great many fruits having choice qualities have been reported, and many of them are well worthy of being tested in different parts of the United States. To this end, I respectfully request you to send me specimens of your Krull pear, samples of fruit of which I have already received. If you will be kind enough to send me from 25 to 100 seions of that variety, carefully packed in damp moss or some other material, I will place them in the hands of the directors of the state Experiment Stations and a few other careful experimenters for the sole purpose of having them tested and compared with other varieties. If it proves of special value in any locality you will be promptly notified, and in any case, it is understood that the variety is not to be disseminated by the parties receiving the specimens for experiment except by your consent. By this means a valuable variety may be brought to notice that will be a benefit to the world. Soliciting your co-operation in this important and very desirable work in all matters pertaining to fruit culture, I am very respectfully,

H. E. VAN DEMAN, Pomologist.

NOTE. — In reply to the above, I sent on March 2, 1891, sixty seions to the Department for the purpose stated.

Pres. Evans, Missouri State Horticultural Society, writes under date, Harlem, Mo., February 7th, 1891, that the variety has come to hand in fine condition. It is fine looking fruit, well shaded and a size somewhat resembling the Kiefer. I cut one and devoured it up among a number of persons and they all pronounced it good to very good. It is a large fine fruit, the skin and firmness of the flesh, it makes a good shipper. It is undoubtedly the best winter pear that I have seen since I left Europe.

Oak Glen Vineyards, Napa County, California, Feb. 12, 1890, by Mr. Geo. Hussman and Mr. Havens: "Mr. VanDeman, if you were kind enough to mail me, received from you specimens of 'Krull' for the several counties and the Southwest generally it will prove a great acquisition; the fruit being of fair size and quality compared with the best old standard varieties as certain keepers and shippers. Were I still in Missouri, I would not hesitate to plant it largely.

Cobden, Ill., Feb. 6, 1890, from T. E. Goodrich: Specimens of "Krull" pear received. We ate one of the pears; it was good, sweet and rich. The other is not quite ripe and bair fair to keep several weeks. The middle of February will be doing very well for a pear.

Gilman, Ill., Jan. 31, 1890, F. J. Mann writes: Samples of "Krull" received. The pears imported from Holland have not yet testified for quality, and from appearance would say that it is a very valuable acquisition to our winter fruits, and will certainly make a place for itself in the markets, for which it seems to have several qualifications.

Savoy, Ill., Feb. 3, 1891, by M. Dunlap: The "Krull" pear arrived a little late for their handling in mail-bags, but were, I should say, very fair in quality and size and promise to be a valuable variety. If they keep long in Missouri, they ought to prove very desirable for Central and Northern Illinois.

From J. Webster, Centralia, Ill., President of Illinois State Horticultural Society, under date of Feb. 2, 1890, writes: We acknowledge receipt of samples of "Krull" pear. In quality and appearance it compares with the few we have in this latitude; better than Buena Easter, hardly as good as Winter Nelis and West Morceau, but better quality than Vicar or Honeycrisp pears. We have had from St. Louis County, Mo., a few years ago, I have no hesitancy in saying that it is worthy of being added to our short list of pears.

A. C. Hommond, Secretary of Illinois State Horticultural Society, Warsaw, Ill., writes under date of Feb. 4, 1890, Yours of last date, also the specimens of "Krull" pear came duly to hand. The fruit is fair in quality, perhaps good for a winter pear, this is certain for both its size, appearance and keeping quality, and certainly make it valuable.

Nursery, Ill., February 8, 1890, J. V. Cotta writes: I received samples of "Krull" pear. I find them just commencing to get ripe, they are very sweet and fine. They are strictly first-class quality; in size the fruit was above medium and fine appearance. Its keeping qualities ought to make it a valuable market fruit.

Alton, Ill., February 8, 1890, J. C. Brown writes: I have a containing five pears received. As to the quality of the pear would say it would grade as very good. In appearance it is fine for market purposes and the size makes an acquisition from the fact that it is better in quality than the Pear that we have in most parts of Illinois at this time of the year. Our winter pears grown in this latitude will not keep after Christmas, even with the greatest care.

Report of Committee on Rewards at State Horticultural Society, Lebanon, Mo., 1890. We find on the table the following: C. T. Malinckrodt, of St. Charles, a medium-sized light yellow pear of good quality. If as late and good a keeper as it is said to be, which it is, it will be a valuable addition to the list of pears. If seen samples before us, it will have a value, as we have no pears that will keep well into the winter in this climate, and we therefore recommend it for trial.

**YELLOW IMPERIAL.** Fruit— medium, oblate, oblique, whitish, shaded with crimson in the sun. Flesh— yellowish, firm, crisp, juicy, subacid. Season—November to February. Tree—moderately vigorous, but productive.

**Clayton.** Fruit—large, conical, regular, greenish yellow, striped and splashed with dull red. Flesh— yellow, breaking, subacid. Season—January to March. A very valuable market variety and well worthy a trial.

**Missouri Pippin.** Fruit—large, roundish, oblate, slightly conic, sometimes oblique, yellowish, striped, shaded and splashed with two shades of red and with a greyish appearance as if covered with a thin bloom. Flesh— yellowish, compact, moderately tender and juicy, not subacid. Season—December to April.
